AMULETS AND CHARMS

Introduction

The Pitt Rivers Museum has almost 6,000 amulets and charms in its collections; though not all of them are on display. They have been collected from all over the world, including England, and demonstrate the wide array of methods for using magic employed by different cultures.

An *amulet* is defined by the Oxford English Dictionary as: 'Anything worn about the person as a charm preventative against evil, mischief, disease, witchcraft, etc.' The definition of *charm* is very similar: 'Anything worn about the person to avert evil or ensure prosperity', though a charm may also be a spell or incantation believed to have a magical power.

Some of the objects on display are technically not amulets or charms but objects that were used in a ritual or instilled with a supernatural power. Some have been taken directly from the natural environment, and assigned a magical function by a single person, while others have been carved or painted to create an object with a meaning that would be recognised by most members of the culture.

The underlying theme that unites all amulets and charms is that the people who created and used them believed in them; almost any object may become a charm or an amulet, so long as someone believes it has the power to affect or alter the world around them.

Some amulets and charms are examples of 'sympathetic magic', which generally means that the appearance of an object resembles, in some way, the cure or protection it is believed to offer.

Unlike some of the objects on display in this Museum, amulets and charms are still widely used in many cultures today. You may have an object yourself that you trust will bring you luck! The amulets and charms on display at the Pitt Rivers Museum are material evidence of the hopes and beliefs that are shared by all of humankind.

Americas and Oceania

This tree bark – *aimona* - is an example of an object that was used for the magical purpose of inducing the love of a woman. Love magic in this region of the world is called *vani*, and typically involves an object upon which a spell is placed. The collector of this object, Diamond Jenness, received the Oxford University Diploma in Anthropology in 1910.

▲ D'Entrecasteaux Islands, Melanesia, Oceania; 1913.88.342

Both the boy and the girl have recourse to magic to ensure the abiding affection of the loved one. The youth will privately sing over the tobacco he gives his fiancée to smoke, or the betel-nut that they chew together; and the girl will do the same... Usually something else is mixed with the tobacco, a scented leaf or root, or blood or dirt from the lover's person. It would really be quite difficult to win a girl without the vani, the magic herb or mixture which evokes the pain of love.

Diamond Jenness and A. Ballantyne, *The Northern D'Entrecasteaux*, Oxford: Clarendon Press (1920), page 98.

▲ Santa Isabel Island, Solomon Islands, Melanesia, Oceania; 1904.29.2

This is a narrow bag of woven cane, with four shell rings placed around the middle, and a plait of pig's bristles tied to the looped end. It contains the relics of the maker's ancestors, and was probably used with a magical spell

intended to cause the death of an enemy. The Solomon Islanders held their ancestors in great reverence, and also believed very strongly in magic. Both their magical beliefs and their religious system were based on the concept of *mana*, which has been defined by Starzecka and Cranstone as 'Supernatural power which can be present in varying degree in man and objects but always derives from spirits. It is associated with anything ... outside the natural order of things: exceptional success in business or talent for carving are caused by mana, and an unusually shaped stone has mana' (Starzecka and Cranstone 1974: 13).

▲ Orokolo, Papua New Guinea, Melanesia, Oceania; 1938.36.278

This amulet is made from a dwarf coconut, carved with clan motifs and rubbed with lime to emphasise the design. Known as *marupai*, such amulets are still used for magical purposes in Papua New Guinea today. They are usually passed from uncles to nephews, and the carved designs

represent animals and fish that are assigned to the various Orokolo clans. They are normally carried in a small string bag, with the mouth and nose sticking out of the end. Aromatic bark, flat seeds, or small pieces of bone from a magic man are sometimes stuck in the mouth of the *marupai* to make it more powerful. They are used for many magical purposes: keeping evil spirits away from gardens; for assistance and good luck when hunting wild pigs; to magically draw specific types of fish to the shore; to bring good health through disease protection; to bring good weather; and, in some cases, to bring about the death of the owner's enemies.

▲ Queen Charlotte Islands, British Columbia, Canada, N. America; 1891.49.35

This object was made by an artist of the Haida people who live on islands off the west coast of Canada. Salmon are one of their main food sources, and this object, made from wood and painted to represent a salmon, was used in a ritual to draw the salmon up the river during periods when salmon were scarce. A chief, carrying the carved salmon, and a shaman would lead the people to the beach. The ceremony involved dancing and singing while the shaman addressed the water spirits.

▲ McDowell Reservation, Arizona, USA, N. America; 1911.86.111

This amulet comprises twelve shells (eleven *Olivella intorta cypr* and one *Olivella biplicata Sby*) and two glass beads (one green and one blue). It is an example of an amulet that has been given a meaning by its owner, who was a Mohave-Apache Native American. He used it to interpret messages received from the thunder during summer storms, and also for medicinal purposes. When he did not feel well, he blew on it.

Asia

This object was created to be placed in the spring of a Rengma Naga village called Tesophenyu. The poisonous potions of the Rengma Nagas were composed of a mixture of things taken from plants, insects, animals and their own bodies. Here the wrappings contain a mixture of things that were considered powerful enough to cause malevolent events: the hair of the witch who made it; earth from the grave of a man killed by a tiger and a woman who died in childbirth; leaves of the *agunnu* tree, which withers quickly; a piece of giant taro, which causes stomach irritation when eaten; a nettle leaf; and a leaf of the tree known as the 'flame

▲ Tesophenyu, Nagaland, India; 1928.69.1584

of the forest' because it sheds its leaves suddenly. Some of these items have a symbolic magical meaning, and others are examples of sympathetic magic.

▲ Tohoku District, Northern Japan; 1976.10.5

This charm, from a Shinto shrine in Japan, comprises a packet of red silk decorated with gold thread. It is meant to bring good luck and success in passing exams and other academic endeavours. The Shinto religion is thought to be indigenous to Japan and is as old as Japanese culture. There are no organised structures of belief or practice, simply a system of cultural beliefs to help guide individuals through their lives.

▲ Buddh Gaya, Bihar, India; 1892.41.280

This disc-shaped carved stone features at the centre an image of the footprint of the Hindu deity Vishnu. Vishnu used his foot to assign the demon king Mahabali to the underworld.

This plaited cord has seven small figures of Buddha woven into it at regular intervals. Buddhism is practised all over the world, but primarily in India, Central and Southeast Asia, China, Korea, and Japan. This amulet was worn to protect against death in battle.

▲ Myanmar (Burma), Asia; 1949.8.1

Africa

This object, known as an *ikenga* or personal god, from the Igbo people of Nigeria, consists of a stylised figure surmounted with metal horns. The body has two metal discs on top of a base covered with cowrie shells, with a bronze *manilla* (an open ring with enlarged finials) bound to one side. The forms of *ikenga* vary, but horns are usually represented in some way, and they are usually small so that they can be easily carried. This particular *ikenga* seems to have had some significance to blacksmiths, as the collector

reported that they had been described to him as ‘blacksmiths’ mascots’, and would bring financial prosperity as well as protection from evil forces.

▲ Nigeria, Africa; 1916.45.110

◀ Ibadan, Nigeria; 1930.34.1

This Yoruba amulet box or *ori* consists of woven leather strips and rows of cowrie shells as the base. It has three leather rings in the middle and three velvet rings (maroon, yellow and purple) at the top, with a red textile stopper. It was used as a container for amulets and charms. The original owner of this *ori* assured the collector that it is filled with ‘juju’, or protective amulets and charms, but could not tell him exactly what was inside.

This amulet comprises a rubber horse with a saddle, decorated with small square pieces of red, green and yellow textile. It has a leather thong around its neck with small 'charms' consisting of pieces of wound metal wire. The horse's eyes are metal nails. It represents a 'night horse', and was used in the rituals of the Mba tsav secret society of the Tiv people of Nigeria. One of the beliefs of the society was that they could mount this horse, become invisible, and travel long distances at night in order to kill a victim and return unnoticed.

▲ Benue Wukari, Nigeria; Africa, 1932.18.21

Objects of this kind were sometimes confiscated by the British Administration when Nigeria was a British colony.

This amulet is made from the right scapula bone of a sheep, inscribed with Arabic writing. It is an example of using beliefs to ward off dangers that are present in the natural environment. It was collected by M. W. Hilton Simpson, who recorded that the writing, whether on bone or pieces of paper placed over the doors and windows of the home, offers protection against scorpion stings.

▲ el Kantara, Aurès Mountains, Algeria, Africa; 1920.42.15

Scorpions are said to be very plentiful in the area of the Djebel Cherchar during the summer months, accordingly we found similar charms in every native house as we progressed, but the pests must be at least as common farther to the west, where the usual method of guarding against their bite consists merely in the wearing of a charm upon the person, certain scribes of the Aurès being believed to be capable of writing words and signs upon a certain kind of bone which, if worn, will enable the wearer to pick up by hand any scorpion unharmed.

M. W. Hilton-Simpson, *Among the Hill-Folk of Algeria: Journeys among the Shawia of the Aurès Mountains*, London: T. Fisher Unwin (1921), page 217

▲ Kenya/Tanzania, Africa; 1898.66.9

This amulet, from the Maasai people of Kenya and Tanzania, is made from ivory and was hung around the neck of a cow. The Maasai are pastoralists who depend, for their diet, on the

milk, blood, and meat provided by their animals. Their cattle are thus essential to their survival, which is why such amulets were used. In this case, the cow was probably being protected from something similar to the Evil Eye, which the Maasai refer to as *inkonyek*, or people with 'eyes'. If an individual has 'eyes', he or she is able to look right through the flesh of living things. If the person with the 'eyes' gets envious of what others have, they are able to poison people and cows with just a glance. Their poisonous looks are especially deadly to young children and calves.

This string of red glass beads (possibly made in imitation of coral), with a red glass pendant inscribed with a crescent and a star, was worn by an Egyptian woman whose spirit was possessed by a *sheikh*. The *sheikh* was a holy person who had magical powers when he was alive and who was sometimes believed to possess people after his death. This charm would cause the *sheikh* to treat the woman kindly, and to prevent him from making her ill. If someone believed they were possessed they could go to a magician who would interpret messages from the *sheikh* and gave directions about what to do to please him.

▲ Al-Fayyum al-Lahun, Egypt, Africa; 1933.58.8

This charm, consisting of powdered 'medicine' within a rolled-up piece of textile, was given to the collector, W. S. Routledge, to protect him from lions. It was made for him by a Kikuyu medicine man around 1909. He wrote an interesting account of this charm being made.

▲ Mount Kenya, Kenya, Africa; 1913.5.69

A typically weird old man came to the camp with his assistant and his small son. He brought his bag of medicines and a calabash strung by four straps and terminating in a single thong; a stool was produced and a mat, on which he spread his bottles. A charm being asked for by the white man to preserve him from attacks of lions, the Medicine-Man at first desired so to arrange its working that the moment the lion saw him it should run away. The customer, however, explained that this would hardly answer the purpose of being able first to obtain a good shot, and the medicine had to be adjusted accordingly. The old man filled the calabash half-full of water, and tipped powder out of each bottle into the palm of his hand. Into this mixture he dipped his finger and drew it across his tongue in the form of a cross; he then put the mixture out of his hand into the water in the calabash, and a portion of it into each of the four divisions made by its four supporting thongs, uttering meanwhile certain formulae. He then got up and walked a few yards away, whirling the calabash and its contents round and round his head, as if he were about to sling a stone, and addressing each of the four quarters of heaven.

Red powder was taken out of one of the bottles, and with it was touched the crown, ear, elbows, knees, and feet of the applicant; a black powder then followed, and with it were anointed his shoulder, crown, knees, hair, feet, and head. The performer took a quill from a bottle, touched some more powder he had put in his hand, and stirred the brew with the quill, uttering incantations. He then tasted the same powder, putting the quill in his mouth, and put it into the brew in the calabash. The quill was also put in the mouth of the assistant. The quill was waved five times round the patient's head and touched his tongue five times. The performers sipped the brew and spat; stirred the brew with an iron instrument and tasted. The crucible was swung eight times round the patient's head, and he was made to taste the brew and spit once to right and left and once in front, repeating the formula each time: 'Bad beasts, do not harm me.' He was instructed to swallow a little, and the remainder of the concoction was gulped down with great gusto by one of the native onlookers. Finally some powder was tied up in a little package to be worn.

W. Scoresby Routledge, *With a Prehistoric People: The Akikuyu of British East Africa*, London: Edward Arnold (1910), pages 269–70

Charms against the Evil Eye and Amulets as Cures

This section contains charms and amulets that were believed to be effective in warding off the Evil Eye. As you can see from the variety of objects here, and their provenances, belief in the Evil Eye exists throughout the world. One of the earliest mentions of the Evil Eye is in a Sumerian text dating to the 3rd–4th millennium BC. However, while belief in the Evil Eye may be widespread, the actual amulets and charms used are usually unique to a particular region, though ‘eye’ themes recur.

The Evil Eye is thought to be able to cause any kind of misfortune, illness, or malady, even bad weather. Affliction from the Evil Eye can come from three main sources: a compliment given by anyone, envy from one who has the Evil Eye, or divine jealousy because of the good fortunes enjoyed by a mortal.

The cultural implications and codes of conduct that have resulted from this fear of the Evil Eye are as varied as the amulets and charms themselves. In some countries, babies and small children were kept covered in filth, in order to prevent compliments or covetous glances. Eating in public also places one in a dangerous position, which is why, in Spain, it is customary to wish another diner *Buen provecho*; this assures the person eating that you are not envious of his meal. In Islamic cultures it is customary to say *Má shá'llah* (What God wills) and *In shá'llah* (If God wills) to preface a compliment, or when speaking of some good fortune. This way, any beneficence is spoken of as having been willed to happen by God. The wearing of charms and amulets is acceptable in

Islamic cultures, and they are often worn with the intention of attracting the very first glance, which will then deflect any evil that might otherwise harm the wearer.

The Hand of Fatima, here in gold filigree, is a common symbol in Islamic countries.

▲ Tunis, Tunisia, Africa; 1917.9.74

Fatima was the daughter of the Prophet Muhammad, and was considered to be one of four perfect women. The Hand of Fatima is a symbol of Muhammad’s family: the thumb is Muhammad, the first finger is Fatima, the second finger is Ali (Fatima’s husband and the cousin of Muhammad), the third and fourth fingers are Fatima’s sons Hasan and Husain. According to some sources, the Hand of Fatima is worn to protect from the Evil Eye because it also represents the hand of the dead, with fingers that could potentially pluck out the Evil Eye and thus blind it.

This glass amulet is meant to look like an eye, and thus uses sympathetic principles to attract the Evil Eye, protecting the owner from receiving a malicious glance. It has three concentric coloured rings (white, yellow and blue) surrounding a black 'pupil'. It was donated to the Museum's collections in 1885; but amulets of this kind continue to be manufactured and used in this way in many areas of the Middle East today.

▲ Hebron, Israel/Palestine, Asia; 1885.3.4

This object is called a *hy-o-tan*. It is an amulet consisting of a blown glass bottle filled with water and pieces of tinsel-leaf foil. A perforated shell (*Trochus cinems*) is attached to the bottle with a piece of string. Its phallic shape is meant to ward off the Evil Eye. This amulet would typically be worn by a child.

This amulet is in the form of a hand made from silver, the palm of which is covered with writing in Hebrew. The Hebrew writing on this object indicates Judaic origin. It was used to ward off the Evil Eye, and is evidence that belief in the Evil Eye was common to both Jewish and Islamic cultures.

▼ Japan, Asia; 1903.42.2

▼ Syria, Asia; 1913.73.15

Cimaruta, Italy, Europe; 1924.11.5 ►

The Italian word *cimaruta* means 'sprigs of rue', which refers to the many healing attributes of the rue herb. Hung from this branch are different charms. The flower could represent either the rue flower, or artemisia, which is associated with the protective forces of the moon. The crescent moon is a symbol of the goddess Diana, who was, among other things, the special protector of childbirth. The key also refers to Diana, because it was believed that Diana opened the gates of heaven in the evening, thus permitting the moon to travel across the sky until she closed the gates each morning. *Cimaruta* are always made of silver, which is another reference to Diana.

Cimaruta are powerful amulets that were used specifically to protect children against the Evil Eye. They are called compound amulets because they are composed of different symbols that are all meant to provide protection from evil and harm.

In Italy it was believed that children are especially weak against the forces of *malocchio* (Evil Eye). The high infant mortality rate was more likely due to poor hygiene and diet, but it was attributed to the Evil Eye being cast on them by a *jettatore*. *Jettatore* is an Italian word of Neopolitan origin, and was used to refer to one who has the powers of the Evil Eye.

These two opercula shells resemble eyes, and are examples of objects that have been taken from the natural environment for use as charms.

▲ Abruzzi, Italy, Europe; 1940.10.044

This cast-silver amulet of a mythological sea-horse or hippocampus, has five pellet bells hanging from the body, at various points, and is suspended from a silver linked chain. The hippocampus is a sea monster – a combination of a horse's forequarters with the hindquarters of a fish – with origins in Greek mythology, where the hippocampi were believed to have pulled the chariot of Poseidon, the god of the sea. In some cases, later features were added, including wings

◀ Naples, Italy, Europe;
1924.11.2

and a single horn, as on this particular example. This object would have been jingled to distract the gaze of a potential *jettatore* (purveyor of the Evil Eye) from a baby.

These two dried sea-horses are of the species *Hippocampus abdominalis*. It is unclear exactly what these amulets and charms were used for. One of the only sources of information about the use of sea-horses in this area comes from W. Wyatt Gill, who wrote about his explorations of the South Pacific in 1885.

Vanuatu, ▶
Oceania Melanesia;
1923.87.340.1-2

Two natives of Fate, one of the southern New Hebrides, on the occasion of their baptism gave up to the teacher, who was named Toma, their gods. These gods, to which daily worship had long been offered, were simply dried sea-horses.

William Wyatt Gill, *Jottings from the Pacific*, London:
The Religious Tract Society (1885), page 221

Amulets against the Evil Eye Worn by Animals

This section contains amulets, charms and objects that were used as cures for various ailments, most of which are related to the sea in some way. The collection comes mainly from Italy, but there are also some from Africa, Asia and Oceania, demonstrating that amulets and charms of this kind also occurred in other parts of the world.

This amulet consists of a string of blue beads, intermittently strung with five triangles of blue beadwork with tufts of red and white yarn at the points. It was hung around the neck of a donkey, and would have been used to protect it, as animals could also sometimes be victims of the Evil Eye.
